## TPC (Construction Professional Card)

We accredit workers' professional level/qualifications

## TPC

Tarjeta Profesional  
de la Construcción

[trabajoenconstruccion.com](http://trabajoenconstruccion.com)

More than 60,000 highly qualified professionals across all categories and trades

- A specialized employment exchange dedicated to companies in the construction sector.
- Engage the best professionals for your company through this agile and easy to use tool.
- Support and advice for managing the employment process.

About 700,000 workers in the construction sector are holders of the TPC

The **TPC** endorses:

- Sector specific experience.
- Professional skills qualification.
- Vocational training undertaken.

Provides companies with their workers accreditation.

## Improving professional qualification within the construction sector

### Vocational training for employment

The Labour Foundation for Construction (FLC) imparts professional training for employment through its various training plans and schemes, focussing on employed/unemployed workers and by “training on demand” for companies.

Our commitment to the employability of workers inspires and drives the Foundation to be the leader in identifying the sector's needs and offering the training required by companies.

### Training schemes oriented to those sectors that are most in demand

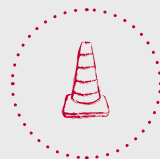

During the Foundation's two decades of existence, the evolution of the construction sector is directly reflected in the organisation's efforts to address emerging trends.

Consequently, the new laws that have been published on occupational safety, habitability, energy efficiency, etc., as well as the growth in the area of building renovation has led to the creation of specific training activities and schemes that increase workers' employability.

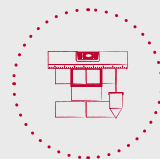

### NEW TRAINING SCHEMES

Energy efficiency

Roads maintenance and operation

Building renovation

### Training innovation

The Labour Foundation for Construction (FLC) leads numerous initiatives, by means of several national and international sectorial research projects, in which innovation is the key factor.

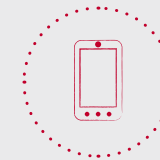

#### Innovative projects at a european level

The Foundation participates in several international projects, funded by the European Commission, whose aims are, among others; to foster the transparency and accreditation of professional qualifications within the construction sector, to develop innovative resources for the teaching-learning process and to enhance the quality of training provided.

### NEW TRAINING TOOLS

Augmented Reality

Videogames

### SUSTAINABILITY ROADMAP (Build Up Skills Spain)

One of the main goals of the construction sector is to accomplish the sustainable energy objectives, as set out by the European Union for 2020.

The Foundation is leading the Build Up Skills Spain project and developing the Roadmap that will be implemented in our country.

### THE CREATION OF TAILOR-MADE TRAINING SCHEMES AND THE MANAGEMENT OF TRAINING SUBSIDIES

The Foundation has great expertise and experience in creating personalised training schemes. With the support of our training consultants, we can guide you in carrying out a training plan that will allow you to achieve the requirements of the current treaties and protocols, as well as fulfilling the training needs of your staff, by means of personalised plans that help companies' adapt to the latest situation in the construction sector.

In addition, the plans include an analysis of the training subsidies available to your company, with the possibility that these course end up costing you nothing.
